

eBeam Capture 1.0

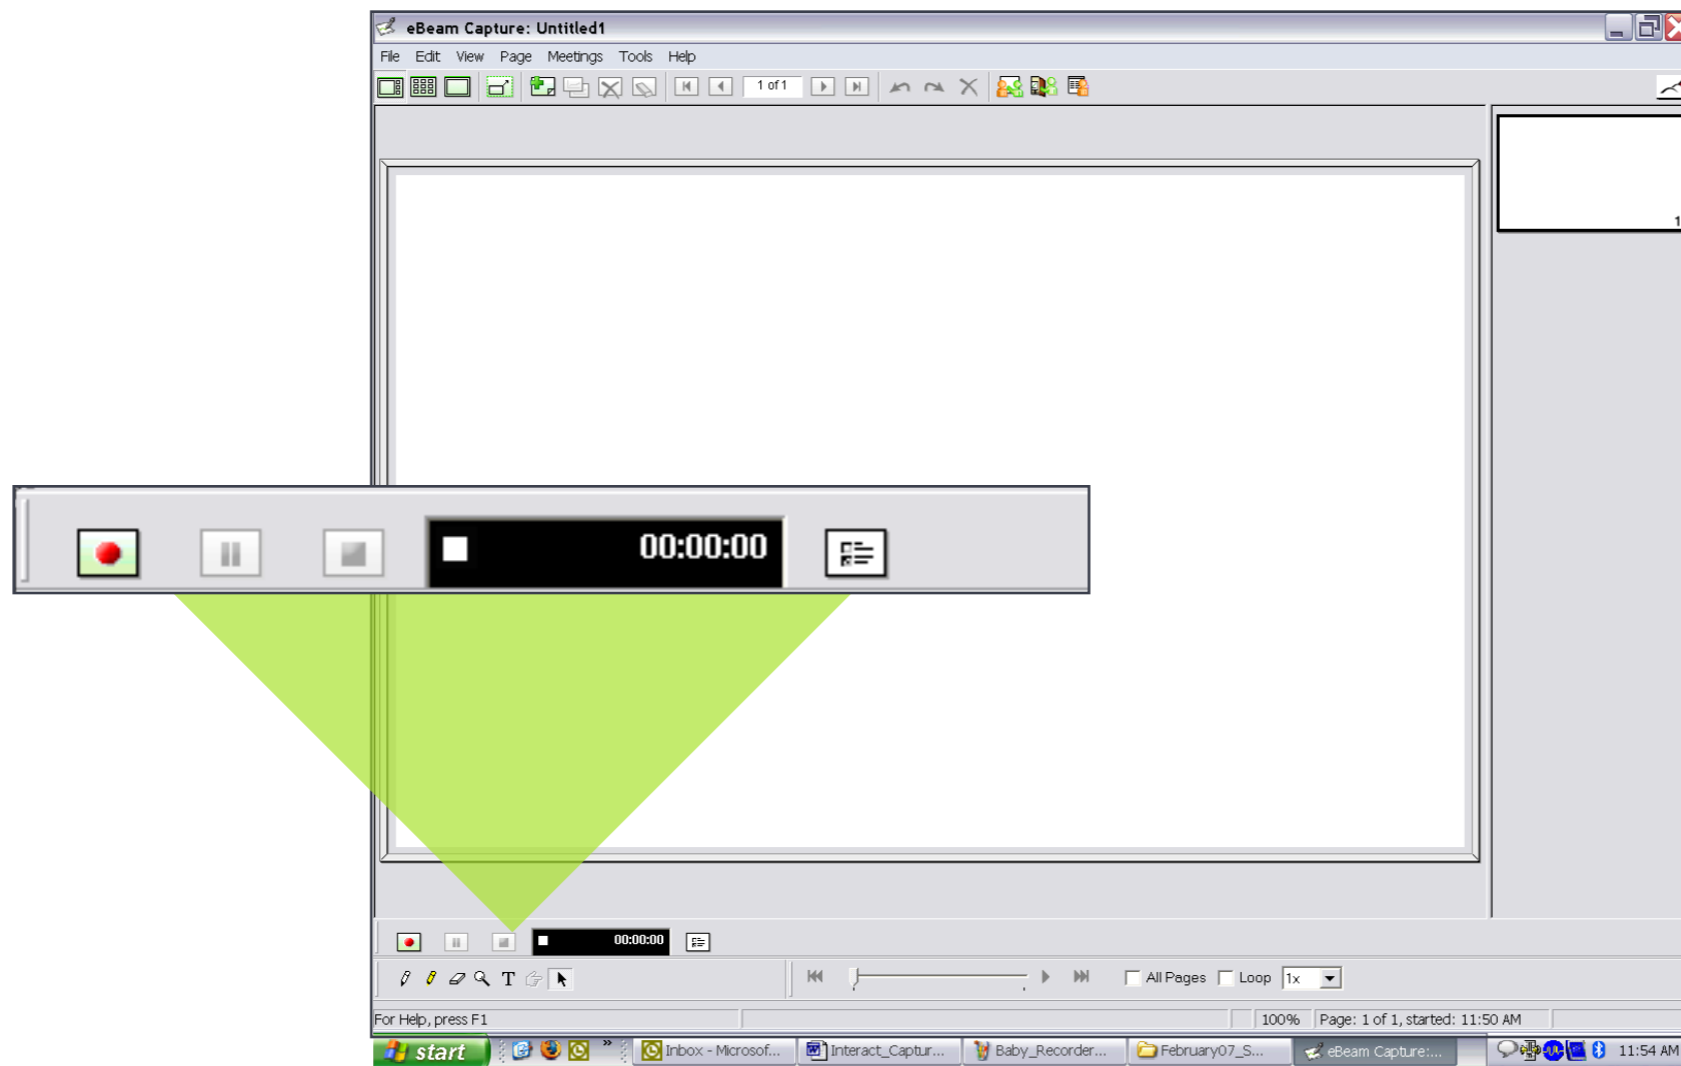

Spring 2007

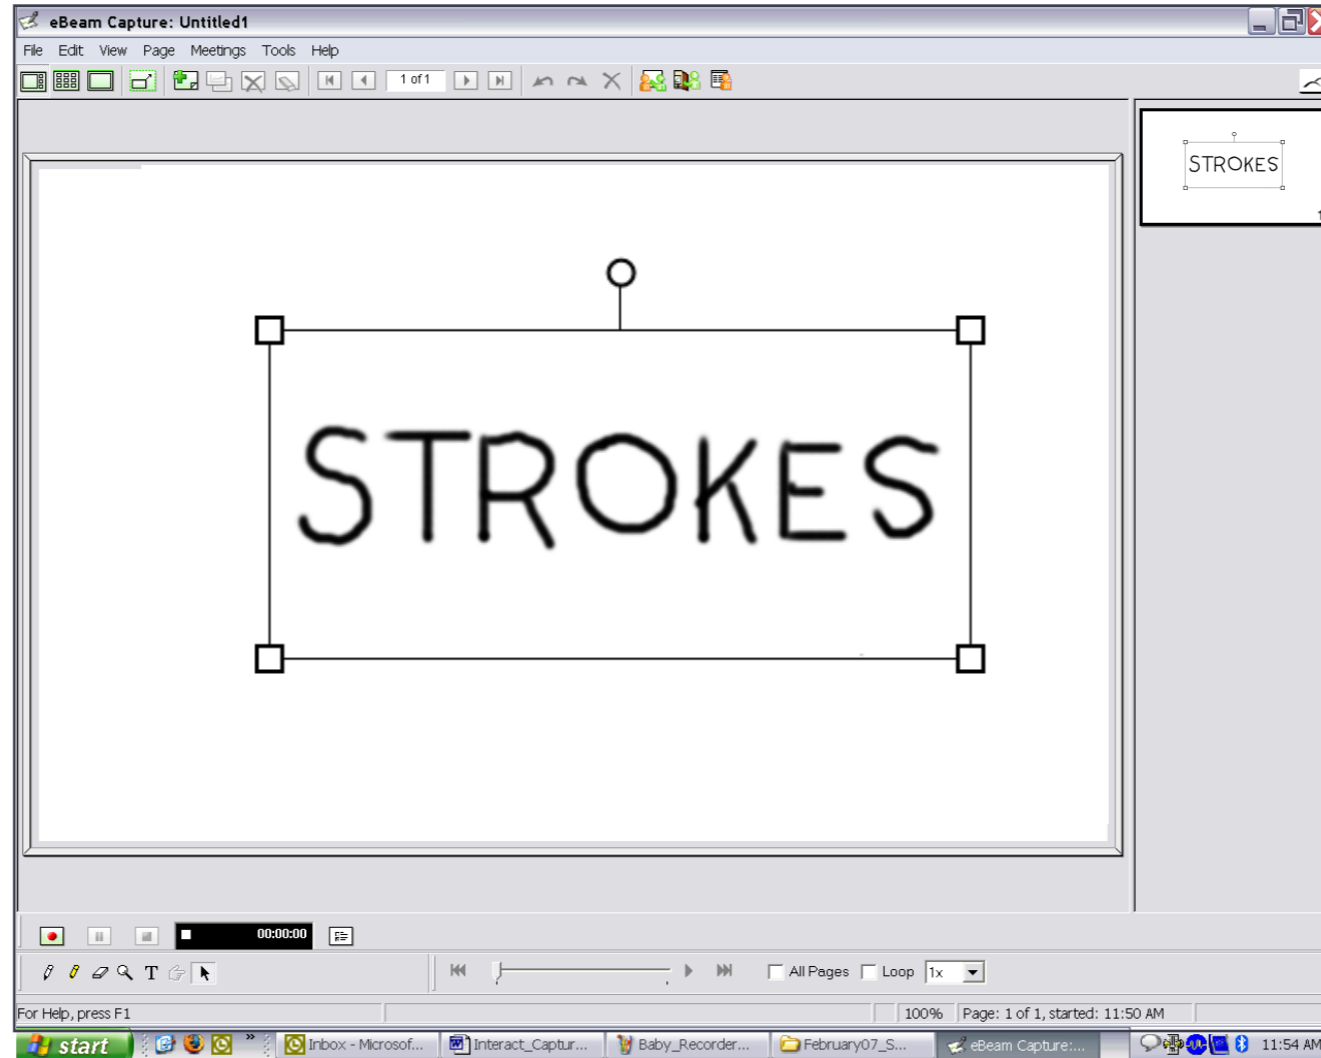

New User-Interface

Based on eBeam Interact's Scrapbook, Capture offers a sleek and modern look that is easy to use and easy to navigate.

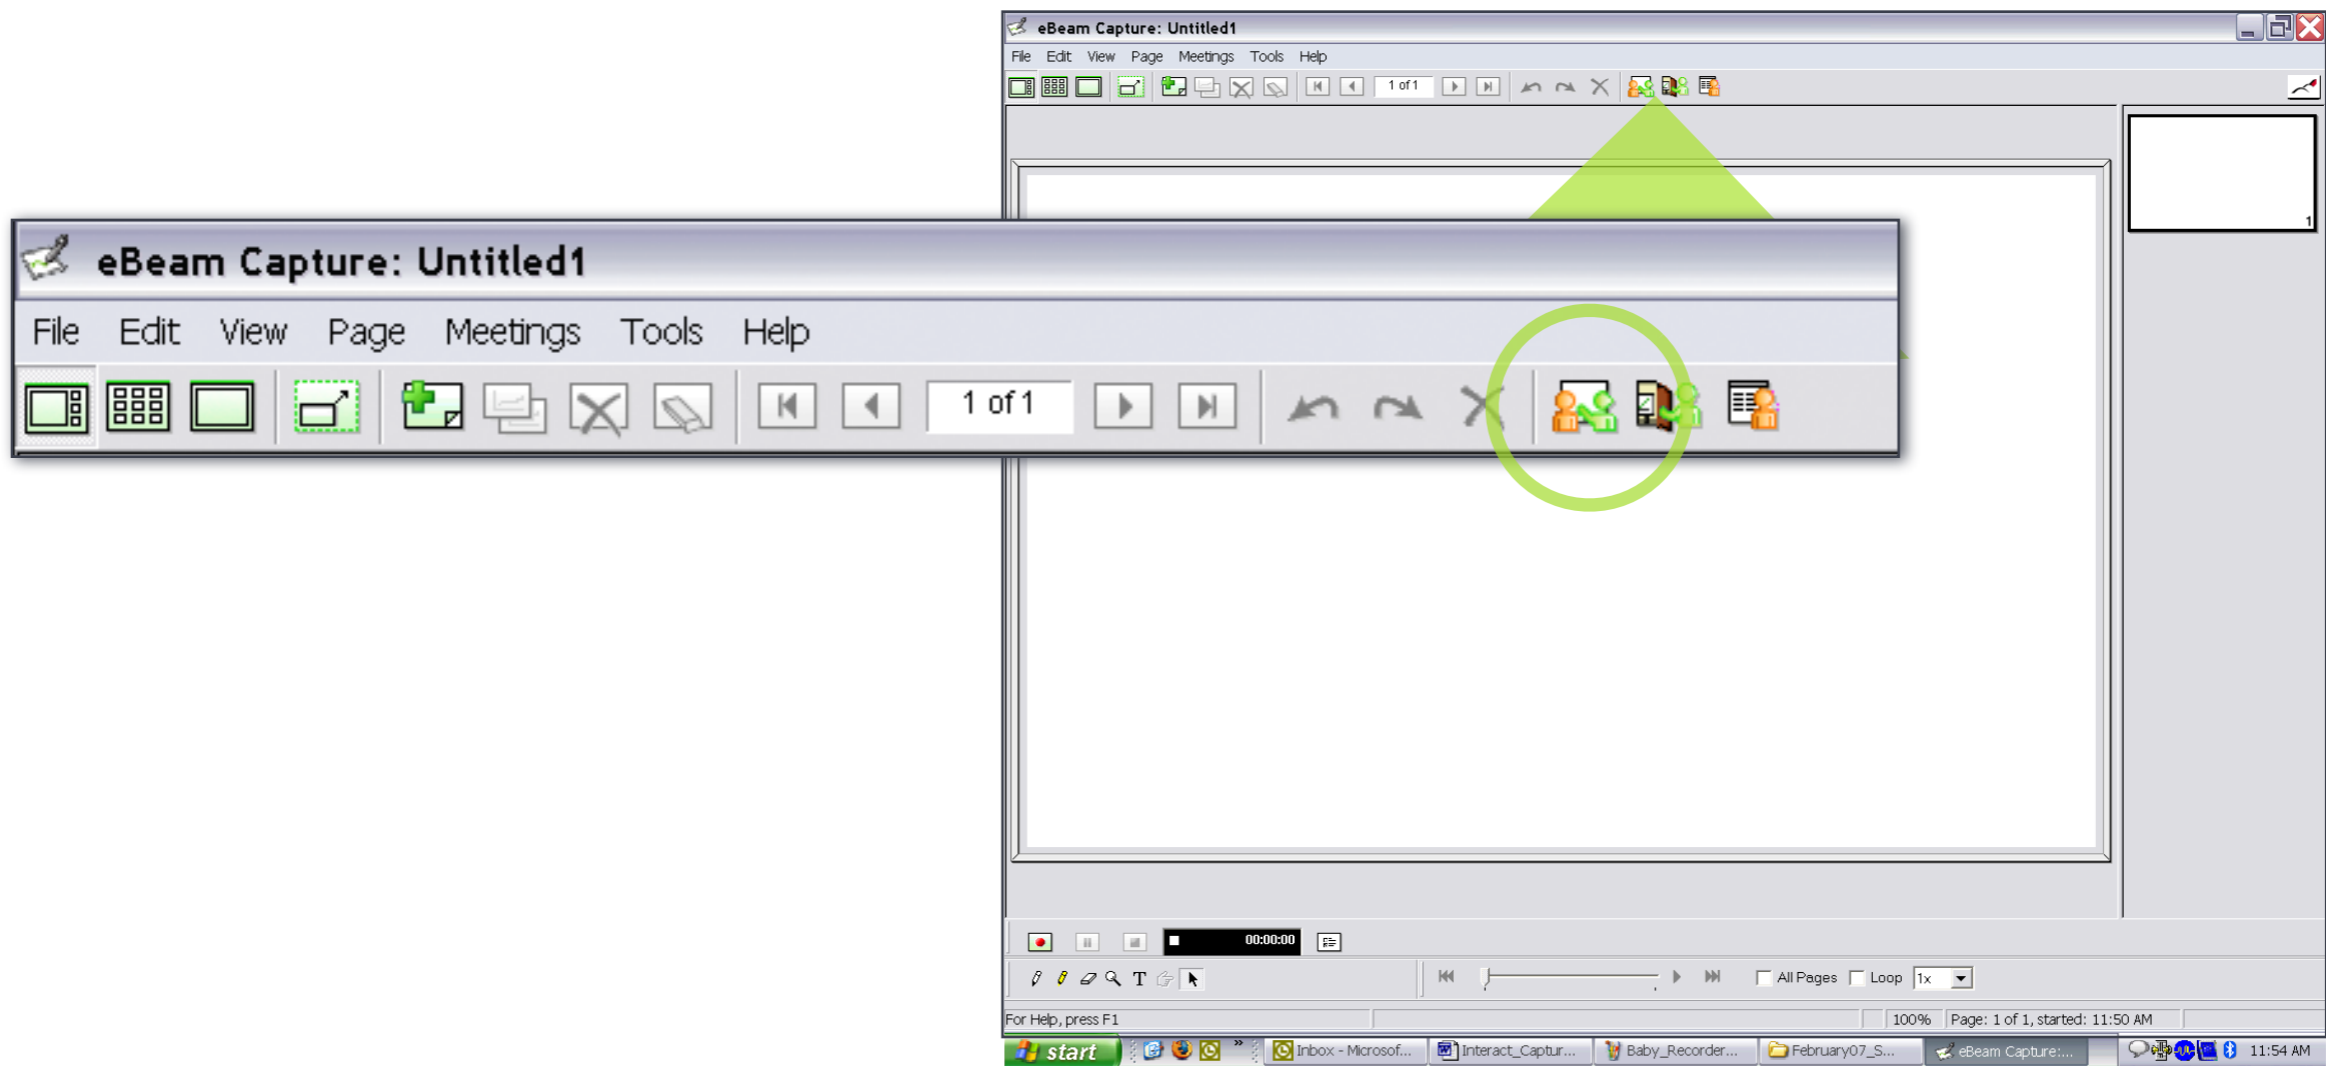

Record

Create a movie file that plays back all of your handwritten strokes synchronized with real-time audio from your computer's microphone.

Selectable Strokes

Every handwritten stroke becomes an object that can be rotated, resized, copied, or pasted. Draw a diagram on your whiteboard and paste a copy of it into your PowerPoint presentation – it's as easy as right-clicking!

Broadcast Your Whiteboard

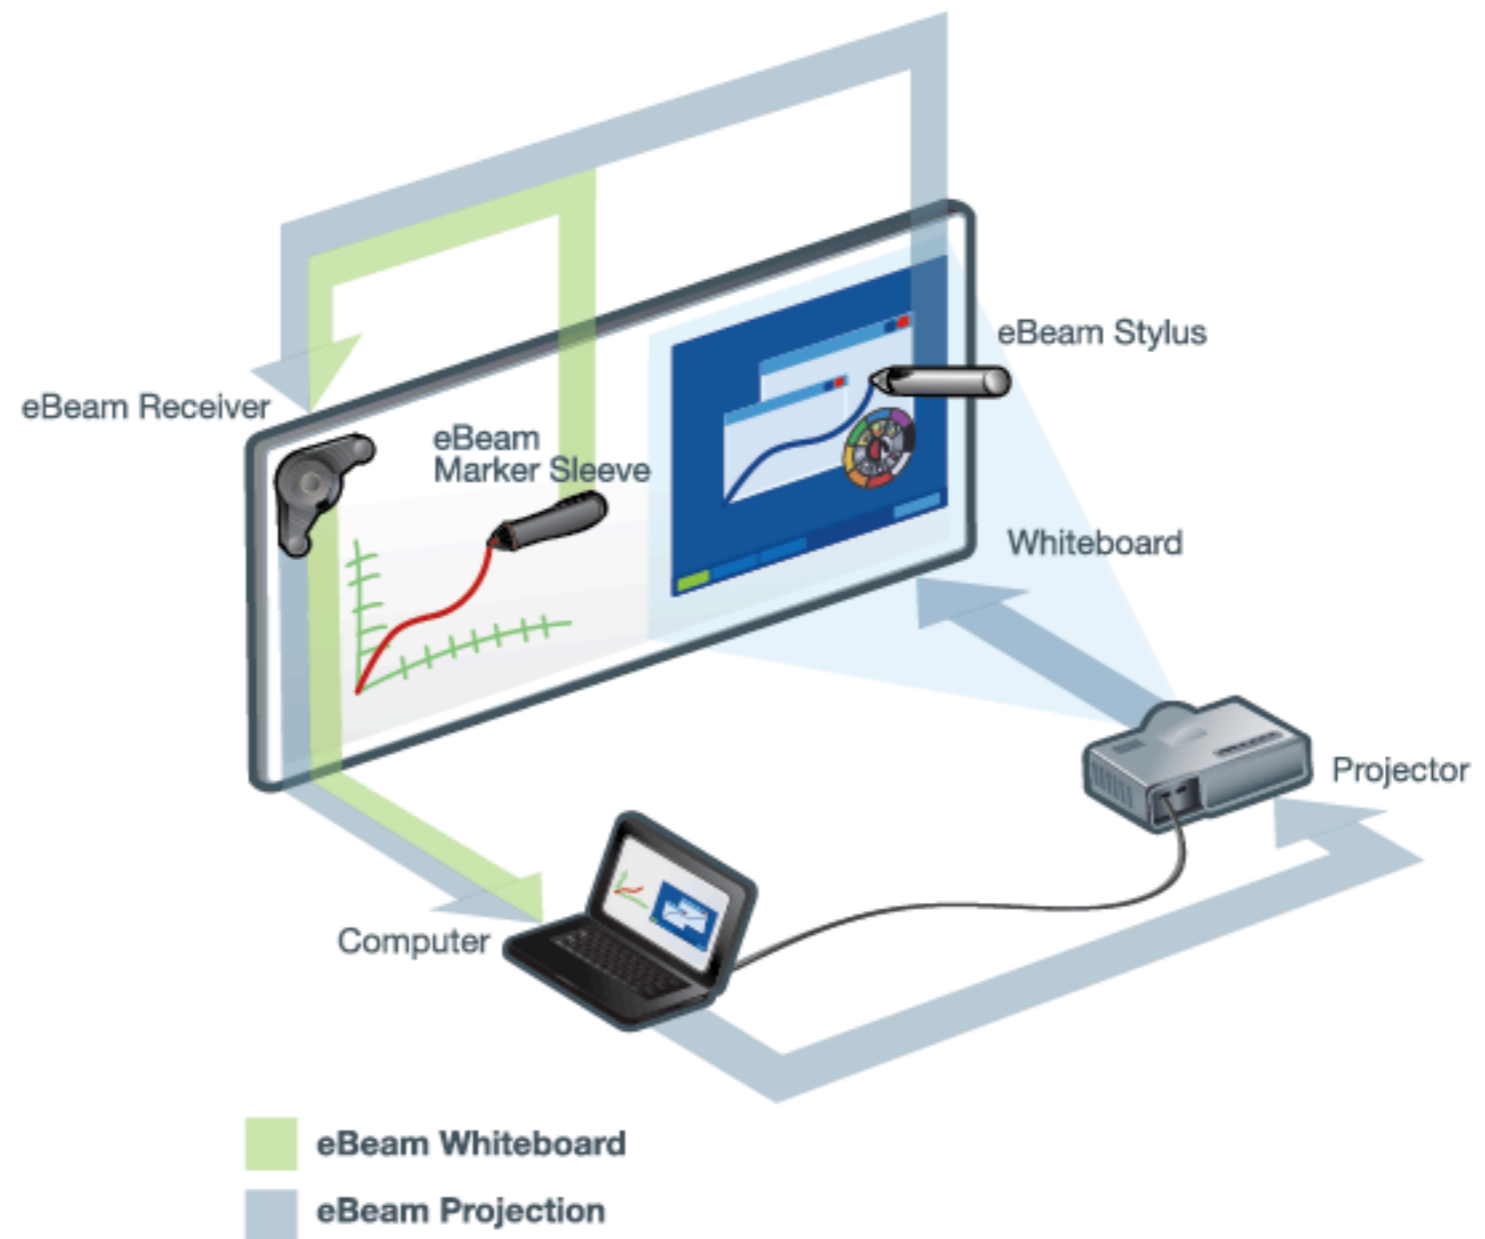

Use the free eBeam Meeting Server to broadcast all of your whiteboard notes to anyone, anywhere in the world with an Internet connection.

eBeam Complete

eBeam Interact and Capture work seamlessly together to ensure all the valuable work on your board is recorded to your computer.

Touch the Interactive Stylus to the board and Interact automatically opens or touch any of the marker sleeves to the board and Capture launches.
